Xyli-Tots Lollies

Caries is the #1 childhood disease according to the CDC, so why not use a product that focuses on promoting good oral health? CariFree Xyli-Tots Lollies are a new kind of anti-cavity reward that make cavity prevention fun for kids of all ages. Xyli-Tots Lollies were developed by UCLA researchers who determined that an extract of licorice root targets and reduces the primary bacteria (*Streptococcus mutans*) responsible for the initiation of dental caries*. As the lollipop dissolved in the saliva, the resulting concentration of the herb fights cavity-causing bacteria in the mouth.
